Design for Journalists

- **What is design?**

Design is creating a visual that usually goes along with text or not. It could be anything visual, from the color of your text to the layout you choose for a project.

- **What is journalism?**

Journalism is telling a real life story that has been investigated, with a purpose.

- **What is design for journalists?**

Design for journalists is the visual aspect of what they write. It's the necessary element in writing today. Nothing is just written. It's active and visual.

- **How did you design this page? Why?**

First on Notes on my phone. Then put it into word. I like writing in Notes now that it looks pretty and gives you options with your text.
